## 1 PREPARE FOR SETUP

1. With door zipped shut and vent face up, spread tent out into a large rectangle.
2. Stake out four corners; to reduce wear on door zipper, stake door end slightly loose.
3. Stake tent through webbing loop for weather protection. Use cord loops for better ventilation.

## 2 INSERT POLES

1. Unzip tent door and place poles near vertical inside shelter where seams converge. Adjust pole height by angling pole bases toward center.

## 3 STAKE OUT TENT

1. Stake out sides.

**Note:** All tents require staking. Unstaked tents are susceptible to blowing away. In some conditions, additional stakes and cord will be necessary. Re-adjustment of stakes and rainfly may be necessary to keep tent tight and weatherproof. Following these tips will prolong the life of your tent.
